

SHARPENER HORL 2 WALTNUT

Serie: Wood Serie: Horl Rollschleifer

Order number: 0767523848976 Hersteller: Horl

€159.00 *

Prices incl. VAT plus shipping costs

Ready to ship today, delivery time appr. 1-3 workdays Also available in our <u>Store at Königsallee 42 in Düsseldorf</u>.

Product information "Sharpener HORL 2 waltnut"

The HORL® 2 is the latest technological benchmark of the HORL® Sharpener family. Two grinding angles and exchangeable grinding discs ensure more flexibility. A completely new, backlash-free rolling feeling is created by the press assembly and the built-in ball bearings. The ceramic coating on the honing side guarantees impressive grinding results.

DIAMOND GRINDING DISC

The industrial diamonds Horl use are suitable for efficiently sharpening all knife steels of any degree of hardness without water. When used properly, the HORL® Diamond Standard never needs to be replaced. The grain size of 46 µm grinds efficiently and precisely. A high-quality sharpening result is achieved in just a short time.

CERAMIC HONING DISC

After processing with the HORL® Diamond Standard, the ceramic honing disc significantly refines the grinding result. Only a few movements are needed for this. The result is a smooth, clean and filigranely sharpened knife edge.

20° GRINDING ANGLE - FOR A STABLE SHARPNESS

The 20° grinding angle delivers new sharpness in the shortest time. The knife also retains its sharpness for a long time due to the stable cutting edge and is suitable for the widest range of cuts in daily kitchen life. Outdoors, it also provides many pocket knives with a stable cutting edge and excellent sharpness for everyday use.

15° GRINDING ANGLE - FOR PRECISE SHARPNESS

With the 15° grinding angle, exceptionally fine blades made of damascus and high-quality carbon steel attain filigrane sharpness. These knife edges can be sharpened very delicately and maintain their stability.

SUPERIOR EFFICIENCY

Industrial diamonds are considered one of the most durable and effective abrasives on the market. The monocrystalline diamonds are harder than any knife steel. By using a galvanic process, the diamonds in the HORL® Diamond Standard are fixed to approx. 55% in a nickel bed. After the first grinding processes, the initially rough surface will become finer and the HORL® Diamond Standard reaches its ideal grinding surface.

This is not an invoice, you will receive an invoice/receipt with the goods.

The combination of strong neodymium magnets and the HORL® S-Pad ensures that the knife is securely fixed during sharpening. Hermann Franzen GmbH & Co. KG Bank details: Managing Director:
